Mark scheme

June 2021

Version: 1.0 Final

216G8300/2F/MS

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts. Alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Examiner.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this mark scheme are available from aqa.org.uk

Glossary for Mark Schemes

GCSE examinations are marked in such a way as to award positive achievement wherever possible. Thus, for GCSE Mathematics papers, marks are awarded under various categories.

If a student uses a method which is not explicitly covered by the mark scheme the same principles of marking should be applied. Credit should be given to any valid methods. Examiners should seek advice from their senior examiner if in any doubt.

M	Method marks are awarded for a correct method which could lead to a correct answer.
A	Accuracy marks are awarded when following on from a correct method. It is not necessary to always see the method. This can be implied.
B	Marks awarded independent of method.
ft	Follow through marks. Marks awarded for correct working following a mistake in an earlier step.
SC	Special case. Marks awarded for a common misinterpretation which has some mathematical worth.
M dep	A method mark dependent on a previous method mark being awarded.
B dep	A mark that can only be awarded if a previous independent mark has been awarded.
oe	Or equivalent. Accept answers that are equivalent. eg accept 0.5 as well as $\frac{1}{2}$
[a, b]	Accept values between a and b inclusive.
[a, b)	Accept values a ≤ value < b
3.14 …	Accept answers which begin 3.14 eg 3.14, 3.142, 3.1416
Use of brackets	It is not necessary to see the bracketed work to award the marks.

Examiners should consistently apply the following principles

Diagrams

Diagrams that have working on them should be treated like normal responses. If a diagram has been written on but the correct response is within the answer space, the work within the answer space should be marked. Working on diagrams that contradicts work within the answer space is not to be considered as choice but as working, and is not, therefore, penalised.

Responses which appear to come from incorrect methods

Whenever there is doubt as to whether a student has used an incorrect method to obtain an answer, as a general principle, the benefit of doubt must be given to the student. In cases where there is no doubt that the answer has come from incorrect working then the student should be penalised.

Questions which ask students to show working

Instructions on marking will be given but usually marks are not awarded to students who show no working.

Questions which do not ask students to show working

As a general principle, a correct response is awarded full marks.

Misread or miscopy

Students often copy values from a question incorrectly. If the examiner thinks that the student has made a genuine misread, then only the accuracy marks (A or B marks), up to a maximum of 2 marks are penalised. The method marks can still be awarded.

Further work

Once the correct answer has been seen, further working may be ignored unless it goes on to contradict the correct answer.

Choice

When a choice of answers and/or methods is given, mark each attempt. If both methods are valid then M marks can be awarded but any incorrect answer or method would result in marks being lost.

Work not replaced

Erased or crossed out work that is still legible should be marked.

Work replaced

Erased or crossed out work that has been replaced is not awarded marks.

Premature approximation

Rounding off too early can lead to inaccuracy in the final answer. This should be penalised by 1 mark unless instructed otherwise.

Continental notation

Accept a comma used instead of a decimal point (for example, in measurements or currency), provided that it is clear to the examiner that the student intended it to be a decimal point.

5	Embedded correct value eg $100 - 4a = 96a$	B1
	Further correct work eg $100 - 40 = 60$, Answer $6a$	B2
	Further incorrect work eg $100 - 40 = 60$, Answer $60a$	B1
	Values may be implied eg1 $10^2 - 4 = 96$ implies 100 eg2 96 only does not imply 100	B1 B0
	Incorrect calculations cannot imply a value eg $10^2 - 4a = 96a$	B0
	$100a$ does not imply 100	B0

Q	Answer	Mark	Comments
6(a)	$\dfrac{9}{16}$	B1	oe fraction, decimal or percentage eg 0.5625 or 56.25%

	Additional Guidance	
	Ignore incorrect simplification or conversion of a correct probability to a fraction, decimal or percentage but not a ratio	
	eg1 $\dfrac{9}{16}$ 0.55	B1
	eg2 $\dfrac{9}{16}$ 9 : 16	B0
	Ignore words alongside a correct probability	
	eg1 $\dfrac{9}{16}$ unlikely	B1
	eg2 9 out of 16 $\dfrac{9}{16}$	B1
	Do not accept answer given in words or as a ratio eg 9 out of 16	B0

Q	Answer	Mark	Comments
6(b)	Linear scale starting at 0 and increasing in 1s or 2s on vertical axis Vertical axis labelled frequency or f or Number or How many Bars or horizontal axis labelled with four types of juice (accept A, G, O, M) Four bars with equal widths Equal gaps or no gaps between the four bars All four heights correct	B3	bar chart could be horizontal bars may be in any order B3 for all criteria met B2 for 4 or 5 criteria met B1 for 3 criteria met or a fully correct 2-bar or 3-bar chart

Additional Guidance		
Mark intention throughout	
If axes and labels do not match the orientation of the bar chart then only criteria 4, 5 and 6 may be awarded	B1 max
All values not needed for axis scale. For example 0 can be implied, but spacing must be linear	
Allow words after 'Number' on axis label, eg 'Number chosen' or 'Number of people'	
Condone a different gap between the vertical axis and the first bar to the other, equal gaps	
If no scale or a non-linear scale is given, bars with heights 6, 1, 4, 5 squares meet the height criterion	
Allow heights criterion if their heights match their labels for their non-linear scale and it is linear between 1 and 6	
Points only or vertical lines can score the marks for criteria 1, 2, 3 and 6	B2 max

	Additional Guidance	
Mark intention for straightness of lines		
Ignore any continuation of line after the last point or any other lines drawn on the graph, for example a line of best fit		

Q	Answer	Mark	Comments
29(b)	0.22	B1ft	oe fraction, decimal or percentage eg $\dfrac{55}{250}$ ft their relative frequency for 250 trains (> 0 and < 1) given in table or plotted on graph

	Additional Guidance	
The mark may be awarded for a correct restart or a follow through from their table or a follow through from their graph		
Ignore attempts to convert a correct relative frequency once seen in (b)		
NB $\dfrac{166}{750} = 0.2213\ldots$ is incorrect (unless it is given as their relative frequency for 250 trains)	B0ft

	Alternative method 1 Shows algebraically that the angles are equal		
	$4x + 40$	M1	may be embedded or on the diagram
	$x + 2(2x + 20)$ or $x + 4x + 40$	M1	
	$x + 4x + 40 = 5x + 40$ and Yes	A1	
	Alternative method 2 Derives and solves an equation for angles at a point and substitutes into $5x + 40$ or $x + 2(2x + 20)$		
	$4x + 40$	M1	may be embedded or on the diagram or implied eg implied by $10x + 80 = 360$
30	$x + 2(2x + 20) + 5x + 40 = 360$ or $x + 4x + 40 + 5x + 40 = 360$ or $(x =)$ 28	M1	oe equation eg $10x + 80 = 360$ $(x =)$ 28 may be on the diagram
	$140 + 40 = 180$ and Yes or $28 + 152 = 180$ and Yes	A1	oe must obtain $(x =)$ 28 from one expression and substitute $(x =)$ 28 into a different expression
	Alternative method 3 Assumes line is a diameter. Derives and solves an equation for angles on a line using $5x + 40$ and substitutes into $x + 2(2x + 20)$ or $x + 2(2x + 20) + 5x + 40$		
	$5x + 40 = 180$	M1	
	$(x =) (180 - 40) \div 5$ or $(x =)$ 28	M1dep	oe $(x =)$ 28 may be on the diagram
	$28 + 152 = 180$ and Yes or $28 + 152 + 140 + 40 = 360$ and Yes	A1	oe must obtain $(x =)$ 28 from one expression and substitute $(x =)$ 28 into a different expression

30 cont	**Alternative method 4** Assumes line is a diameter. Derives and solves an equation for angles on a line using $x + 2(2x + 20)$ and substitutes into $5x + 40$ or $x + 2(2x + 20) + 5x + 40$		
	$x + 2(2x + 20) = 180$ or $x + 4x + 40 = 180$	M1	
	$(x =) (180 - 40) \div 5$ or $(x =) 28$	M1dep	oe $(x =)$ 28 may be on the diagram
	$140 + 40 = 180$ and Yes or $28 + 152 + 140 + 40 = 360$ and Yes	A1	oe must obtain $(x =)$ 28 from one expression and substitute $(x =)$ 28 into a different expression
	Alternative method 5 Assumes line is a diameter. Derives and solves two equations for angles on a line/angles at a point		
	$5x + 40 = 180$ or $x + 2(2x + 20) = 180$ or $x + 4x + 40 = 180$ or $x + 2(2x + 20) + 5x + 40 = 360$ or $x + 4x + 40 + 5x + 40 = 360$	M1	
	$(x =) (180 - 40) \div 5$ or $(x =) 28$	M1dep	oe $(x =)$ 28 may be on the diagram
	Obtains $(x =)$ 28 from two equations for angles on a line/ angles at a point and Yes	A1

30 cont		Choose the scheme that favours the student	
		Up to M2 may be awarded for correct work, with no or incorrect answer, even if this is seen amongst multiple attempts	
		Correct response with other incorrect work	M1M1A0
		Alt 1 $2(2x + 20) = 4x + 20$ followed by $x + 4x + 20$ Alt 1 $x + 4x + 20$ with $2(2x + 20) = 4x + 20$ not seen Apply marks in a similar way in alts 2, 4 and 5	M0M1 M0M0
		$(x =)$ 28	M1M1
		Allow $(x =)$ 28 to be embedded	M1M1
		No method marks scored with a value of x ($\neq$ 28) substituted into $5x + 40$ and $x + 2(2x + 20)$ giving the same value	 M0M0A0
		Yes can be implied eg Alt 1 $x + 4x + 40 = 5x + 40$ and It is a diameter	M1M1A1

	Alternative method 1		
	$6 \times 3 + c = 19$	M1	oe eg $18 + c = 19$
	$(c =) 19 - 6 \times 3$ or $(c =) 1$	M1dep	oe implied by (0, 1)
	$y = 6x + 1$	A1	SC1 $y = 6x + c$ $c \neq 1$
	Alternative method 2		
	$y - 19 = 6(x - 3)$	M1	oe
	$y - 19 = 6x - 18$	M1dep	oe correct equation with brackets expanded
	$y = 6x + 1$	A1	SC1 $y = 6x + c$ $c \neq 1$
